

Motorix

a typeface of alternatives.

Motorix

is a typeface of alternatives. A versatile and highly flavorful constructivist design in three weights with corresponding italics, and hundreds of variant forms. Motorix' interchangeable letterforms yield a multitude of combinations that elicit electronic rhythms and at times take on humanistic forms. The name Motorix is a pseudo-feminized variant [the '-ix' suffix being derived from '-trix'] of the German word 'motorik', which refers to both electronic music and human motor skills. The typeface lives up to its energetic name, synthesizing precise rhythms and alphabetic waveforms into a uniquely upbeat and spunky typeface.
